

GitGrounded

Know if your AI got better or worse, before your customers do

Builders Pitch Fest 2026

Software Automation AI Track

The problem

You change your AI's instructions, or swap which model answers
Did it get better, or worse?
Usually you find out from an angry customer

The solution

GitGrounded checks automatically, every time you make a change, before anyone else sees it

1

Change

Edit the instructions, or swap the AI model

2

Compare

Old and new versions answer the exact same questions

3

Judge

A second AI grades both sets of answers

4

Verdict

One simple signal tells you what happened

Proven on real tests — real AI, real judge

GOOD

Wording tweak

Nothing meaningful changed, correctly passed

BAD

Removed citation rule

Caught the AI making up sources it used to cite

BAD

Cheaper AI model

Caught real quality loss from the downgrade

Moves AI failures from "after it ships" to "before you hit save"
